

Ortho-Glide®

lower limb exerciser

AN NHS INNOVATION

Ortho-Glide®

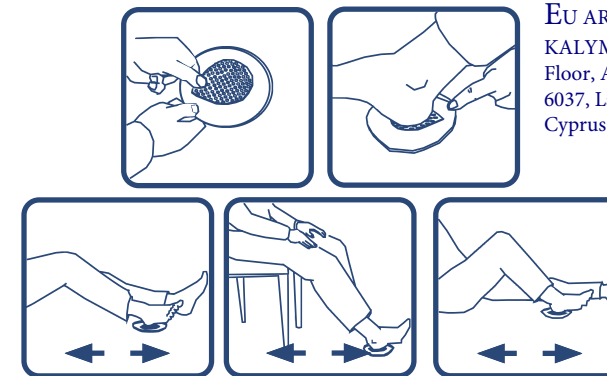

lower limb exerciser

Product Code 4011

ORTHO-GLIDE® lower limb exerciser – a portable, simple and effective aid to rehabilitation after trauma or surgery and helps to prevent DVT (Deep Vein Thrombosis).

ORTHO-GLIDE® makes the process of lower limb exercising easier and is helpful in improving range of motion, joint flexibility and in regaining muscle tone in a way that is simpler for the practitioner to dispense and easier for the patient to use. Recent concerns regarding the spread of infection have raised doubts about the safety of sharing equipment such as sliding boards. ORTHO-GLIDE® has been developed to address these concerns. As ORTHO-GLIDE® can also be used in confined areas, this makes the product a suitable aid for exercising to prevent DVT.

EU AR: MDTi Cyprus Ltd
KALYMNOU 1 "Q MERITO" 4th
Floor, Agios Nikolaos, Kamares
6037, Larnaca, P.O. Box 40451
Cyprus

ORTHO-GLIDE® features a high quality reusable plastic base and replaceable self-adhesive insert pads. The base can be cleaned easily in sterilisation fluid or in a steam autoclave after use by each patient. The insert pads are designed for single patient use and are replaced as they become soiled or lose their adhesion.
